

About Dr. Allen Morgan:

Allen has practiced reproductive medicine on the Jersey Shore for over 20 years.

He currently lives in Monmouth County with his wife and four daughters.

Takes a concierge style approach to treatment versus "Big Medicine".

Approach: Minimal stimulation, never a rush to IVF, highly personalized treatment.

Credentials: Board certified in Reproductive Endocrinology and Infertility, Assistant Clinical Professor at the University of Medicine and Dentistry of New Jersey (UMDNJ), member of The Society for Advanced Laparoscopic Surgery and the American Society for Reproductive Medicine (ASRM).

Laboratory: The Shore Area In Vitro Laboratory at Morgan Fertility & Reproductive Medicine embryology laboratory has consistently been certified by the College of American Pathology (CAP), FDA, and the Society of Assisted Reproductive Technologies (SART) since 1996.

Science + Compassion

How do we achieve such high success rates?

Our success rates are high because solid science is part of our DNA as a practice. We regularly dedicate time and resources to emerging technologies, cutting edge protocols and meticulous quality reviews in order to improve our patients' chances at success.

How do we maintain such high patient satisfaction?

In a field where patients are often treated like a case number, we strive to break down the barrier between patient and provider by offering highly individualized "concierge" style treatment. Our patients access their own medical records online and interact regularly with staff through emails and texts as well as personal phone calls even after hours.

We distinguish ourselves from larger, often less-personal practices by never referring to or grouping patients into "batches". Rather, we address each individual's unique set of circumstances with a "less is more" approach - utilizing less medications whenever appropriate and never rushing to IVF when less invasive treatment options make sense for the patient.
